MEN’S HEALTH
Do you suffer from BPH (Benign Prostate Hyperplasia) but are reluctant to undergo surgery? Are you a patient who wants to learn about minimally invasive treatment options for an enlarged prostate?

PAE
BPH may greatly reduce the quality of life in some men. Symptoms can include the inability to urinate, a weak urinary stream or frequent urge for urination which often causes a disruption in sleep patterns. PAE is an excellent treatment option for men suffering from BPH.

A BETTER SOLUTION
PAE (Prostate Arterial Embolization) is a minimally invasive treatment option for an enlarged prostate (BPH). Our team is the only group providing this procedure in Southern Arizona.

- Minimally invasive—doctors work through an incision the size of a pinhole
- Convenient—performed as an outpatient same-day procedure
- Effective—greater than 80-85% success rate
- Safe—no sexual side effects
